ANNUALIZED NET PERFORMANCE FROM 12-31-02 TO 12-31-11 Income Accounts (50% to 100% Fixed Income)

Important Consumer Disclosure

The Investors Asset Management, Inc. ("IAM") Income Accounts composite (the "Income Composite") includes all actual client accounts invested in IAM's proprietary Income strategy (the "Income Strategy") which includes not less than 50% and up to 100% fixed income securities. Fixed income and equity securities may include mutual funds. The Income Composite performance is limited exclusively to all actively managed IAM client accounts using the Income Strategy during the above stated reporting period and includes those client accounts no longer with IAM. Generally, IAM client accounts following the Income Strategy primarily invest in the recommended investments set forth in IAM's Select List. Some IAM client accounts in the Income Composite may contain investments not specifically recommended by IAM. Investing exclusively according to the Select List is not used as a criterion for investing in the Income Strategy or inclusion in the Income Composite. Some IAM client accounts following the Income Strategy invest in comparatively higher-risk equities than other client accounts following the Income Strategy and thus experience volatility of return that is characteristic with that investment style.

The Income Composite performance demonstrates a time-weighted internal rate of return calculated after earnings. Generally, IAM's Income Strategy does not include the reinvestment of dividends unless specifically requested by the client. The Income Composite performance results are shown net of IAM's advisory fee. Actual client accounts may incur other transactions costs such as brokerage commissions, custodial costs, and other expenses.

Past performance of the Income Composite is not indicative of its future performance. Moreover, the performance of a specific individual client account may vary substantially from the Income Composite results based on the percentage of the client's account allocated to one or more of IAM's composite portfolios. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will be profitable. The performance presented for the IAM Account Total represents the return of the Income Composite for the above stated time period. The performance presented for the IAM Account Equity represents the return of only those equity investments contained in the Income Composite for the above stated time period. The use of the IAM Account Equity performance is presented for comparative purposes only. Comparison of the Income Composite to the S&P 500 is for illustrative purposes only, and the volatility of this index may be materially different from the volatility of the Income Composite due to varying degrees of diversification and/or other factors. The S&P performance data in this report is from Interactive Data and includes reinvestment of dividends.
